

For the Cell Technician

In the past Cellular Technicians were unable to create a map of their drive test data and were limited to real-time troubleshooting. EZ2Map is a simple, cost-effective software package that the Technician can run on a laptop in the field.

Cycle time of fixing RF problems can be drastically reduced by giving the power of mapping analysis to the Cellular Technician.

EZ2Map allows you to quickly display drive data from ZK Celltest log files. Create a baseline map of your area by plotting RSSI, AGC, Ec/Io, RxLev, RxQual, handoffs, etc. of your area.

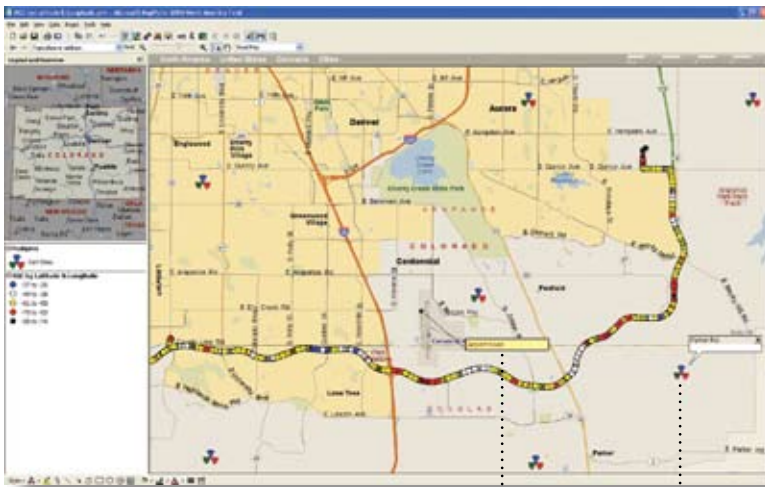

Real Time Mapping

The ability to view your location on a map in real time while driving is included into EZ2Map at no additional charge. Import your cell sites and monitor your location and the network data simultaneously. You can even replay log files allowing you to recreate the drive test in the office so your co-workers can see exactly what you experienced during the drive.

Simple controls and ease of use is maintained in the real time mapping feature. Simply click and go. Don't waste time with complicated install and setup. It's as EZ as it gets.

EZ2Map

Simple and Quick Drive Test Mapping and Analysis

Add notes and graphics

Import Cell sites

The data can be selected and exported to Excel seamlessly. Within Excel the Technician can perform further detailed analysis as well as create charts and graphs on the system performance.

The open format of MapPoint allows you to import other data and display it on the map. You can quickly import your cell site database and display them on the map. Custom symbols can be selected or created to display the information exactly how you want it.

Routes can be created, notes can be entered and stored and the information can be saved and shared. While EZ2Map is designed for the Technician it can also be an essential tool for the System Performance Engineer that wants to perform a quick and simple analysis in the field.

EZ2Map includes the full version of Microsoft MapPoint and the entire US street database. You can also connect a GPS receiver and use it for real-time mapping.

ZK Celltest, Inc.

Version 2 Features

- Includes Real Time Mapping
- Easy import of ZK-SAM, ZK-SAMp and ZK-MPS log data
- Includes Microsoft MapPoint with US and Canada Street database
- European streets are available in European version
- Map Multi-technologies
EAMPS, CDMA, GSM
TDMA, 1xRTT, EvDO,
GPRS, EDGE, UMTS/HSDPA,
iDEN
- Map coverage, interference, handoffs, blocks, drops, etc.
- Map Individual PNs, Delta Hand-off plots, Scanner plots
- Mouse Over Functions Display Parameters Quickly
- Export to Excel and other programs
- Easy to use
- Simple to install

Computer Specifications

- PC running Windows XP
- 1 GHz Processor
- 512K Memory
- 1 GB free on hard drive
